Remarkable Condition Monitoring and Assessment of Power Transformers in Asset Life Cycle Management

**HKIE Technical Seminar
Young Members Committee
The Hong Kong Institution of Engineers**

Date : 11 Sep 2018

Landscape of the Energy Business is Reshaping

“If the rate of change outside your organization is greater than the rate of change inside your organization, the end is in sight.”

Jack Welch ex-CEO General Electric

Challenging Project in Comprehensive Asset Life Cycle Management ?

Challenging Project :

Zero Power Equipment Failure Improve Power Supply Reliability

IIoT

Condition Monitoring & Assessment System

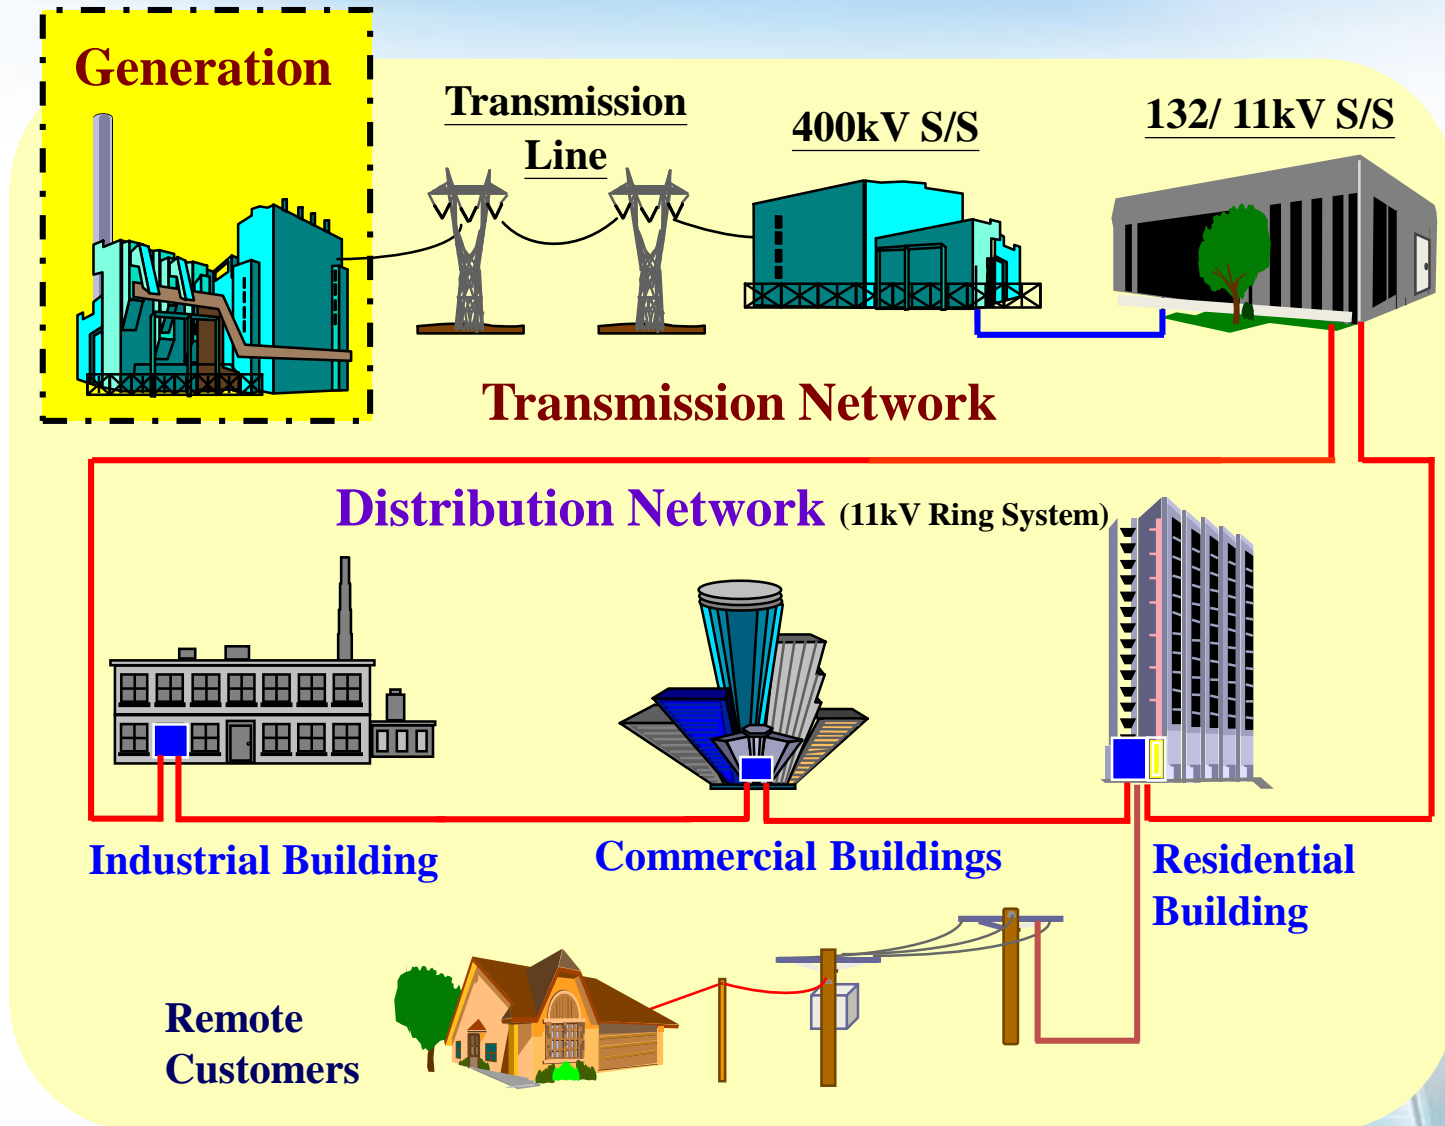

The image shows a top-down view of a large, circular industrial structure, possibly a power plant component like a generator or a large valve. It features a complex network of pipes, cables, and mechanical parts arranged in a radial pattern. The central area is brightly lit, creating a strong contrast with the darker outer regions. The overall color scheme is dominated by metallic grays, blues, and yellows.

Remarkable Condition Monitoring and Assessment of **Power Transformers** in Asset Life Cycle Management

HKIE Technical Seminar
Date : 11 Sep 2018

What is a Power Transformer ?

A Power Transformer is :

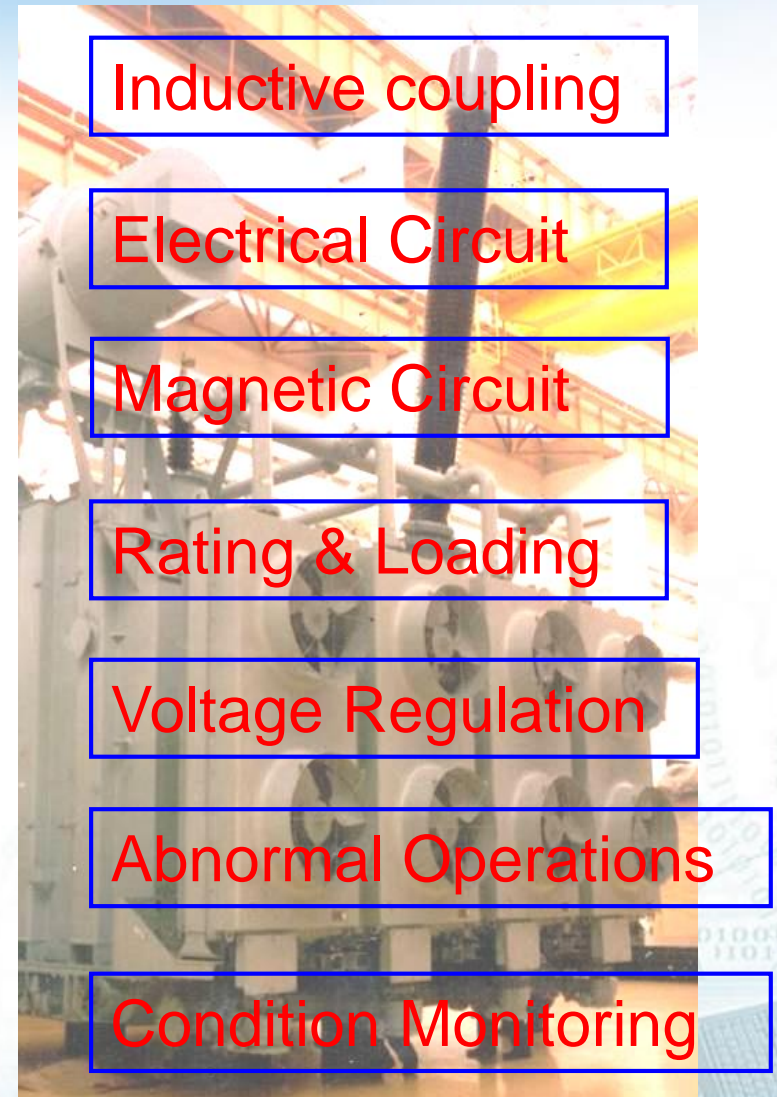

- a static device
- Transfers electrical energy
- from one circuit to another circuit
- varying voltage *from primary winding to secondary winding.*
- varying current *from primary winding to secondary winding.*
- Operating in safe manner under various conditions in power network.

What is a Power Transformer ?

A Power Transformer is :

- a static device
- Transfers electrical energy
- from one circuit to another circuit
- varying voltage *from primary winding to secondary winding.*
- varying current *from primary winding to secondary winding.*
- Operating in safe manner under various conditions in power network.

Operations of Power Transformer

- **Main Parts**

- Steel
- Copper
- Insulating Oil
- Insulating Paper

- **Operational Stress**

- Electrical
- Thermal
- Mechanical
- Chemical

Asset of Power Transformer and Failure Mode

Failure modes:

Dielectric faults

Thermal faults

Mechanical faults

External faults

Transmission Power Transformers

Power Transformer : Condition Monitoring & Assessment Systems under Smart Grid Operations

- Service life of 50 years is required for Power transformers operating in power system.
- Power transformers are subjected to different levels of dielectric, thermal, mechanical and chemical impacts
- Failure of power transformer hamper the power system performance and post hazards to the working personnel.
- Effective condition monitoring, assessment and diagnostic techniques under smart grid operations are required to identify these problems at an early stage for just-in-time maintenance.

Just-in-time maintenance

Power Transformer : Condition Monitoring & Assessment Systems under Smart Grid Operations

- Power transformer condition assessment under smart grid operations requires a great variety of state-of-art technologies to be applied.
- embark on a number of advanced condition monitoring systems under smart grid operations for power transformers including
 - ❖ partial discharge detection and location,
 - ❖ dissolved gas analysis,
 - ❖ winding movement and deformation detection,
 - ❖ furfural concentration measurement, etc.

Big Data: 4V definition

Big Data Characteristics

The network of a multitude of devices connected by communications technologies.

Can monitor, collect, exchange, analyze.

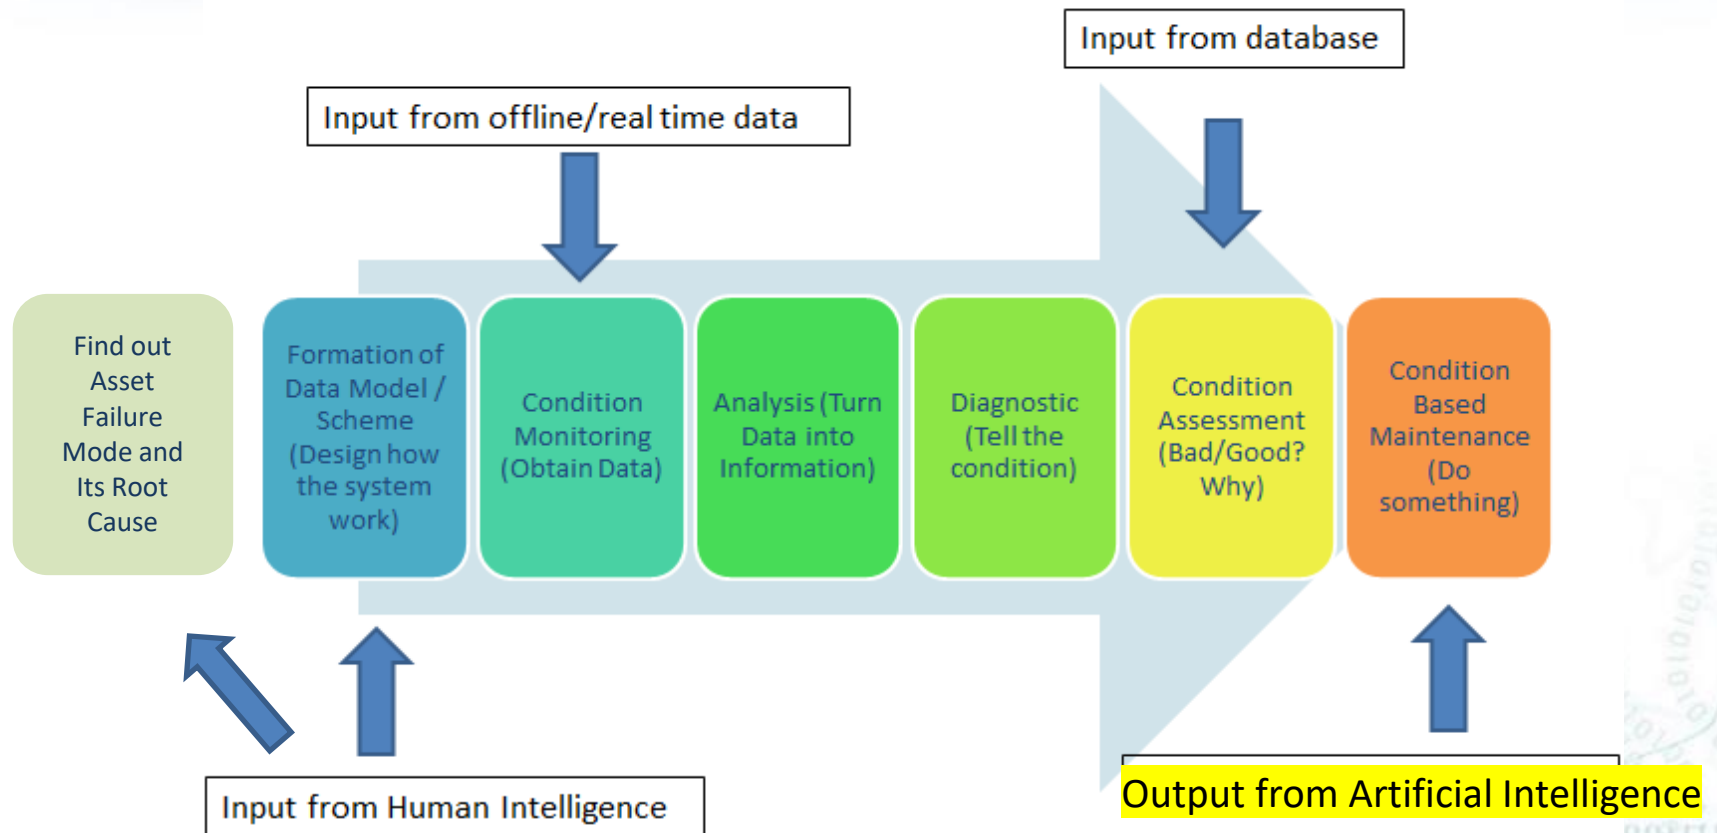

Help drive smarter, faster business decisions for industrial companies.

Deliver valuable new insights

Industrial IoT

Brings together brilliant machines, advanced analytics, and people at work.

Condition Monitoring(CM) to Condition Based Maintenance(CBM)

Conditional Based Maintenance (CBM)

- ▶ Maintenance man hours
- ▶ Days in maintenance
- ▶ Time between overhaul
- ▶ Days pending repair

- ▶ Total parts cost
- ▶ Premature part failure
- ▶ Material cost avoidance
- ▶ Operational cost avoidance

- ▶ Performance
- ▶ Morale
- ▶ Sense of safety
- ▶ Sense of time savings
- ▶ Confidence

Realization by Value

HKIE Technical Seminar

Date : 11 Sep 2018

*“I conceive that the great part of the miseries of mankind are brought upon them by false estimates they have made of the **value** of things”* - Benjamin Franklin

*“Price is what you pay;
value is what you get” -
Warren Buffett.*

-

Failure Modes :

Some basic concepts

Failure Modes

Bathtub Failure Curve is assumed:

- ✓ Time based maintenance
- ✓ Periodic Monitoring

Failure Modes

68% of Equipment - infant mortality and random failure:

- ✓ Detective monitoring
- ✓ Online continuous monitoring, especially early years

Realization by Value in Advanced Condition Monitoring Systems under IIoT

- Early warning of potential failure
- Auto data collection & expert systems
- Better use of skilled resources
- Increased asset utilisation – we can get more from it
- Better asset decision making
- Lower maintenance costs
- Higher reliability
- Condition Based Maintenance

Drivers for Online Condition Monitoring

Industry Practices for Online Condition Monitoring

Q20 - Q30 [Application of condition monitoring (CM)] : Does your company install CM systems on **EXISTING** equipment in any of the following categories;

A : Before end of life to avoid faults, or gain knowledge

B : After faults on the unit, or similar units

C : After repeated alarms

D : Other

The outcome for Online Condition Monitoring

Q37 - Q47 [Benefits of condition monitoring] : Has your company avoided failures through the use of condition monitoring for the following equipment?

: Yes

: No response

: No
